XTR 850
Programmable DC Power Supplies

www.programmablepower.com
The XTR Series is the new standard for powerful, programmable DC power systems. Designed for test, production, laboratory, OEM and quality assurance applications, the XTR provides a wealth of features to ensure accuracy and greater efficiency. It puts clean, reliable power at your disposal and delivers stable, variable output voltage and current for a broad range of development, test and system requirements.

**Highest Power Density**
High frequency, soft switching technology in the XTR Series provides up to 850 Watts in a 1U half-rack package. This represents the highest power density available from any manufacturer. With 12 models, there is a configuration available to meet every application.

**Comprehensive Digital and Analog Interface Options**
The XTR comes standard with USB 2.0, RS-232, RS-485, isolated and non-isolated analog interfaces to provide a comprehensive set of options to connect to a PC or other network device. This design provides the convenience of being able to accommodate a wide range of installation configurations. Ethernet and GPIB interfaces are available as options.

**Scalable, Multi-Unit Design**
XTR power supplies can be connected in parallel or series to produce greater current or voltage output for your applications. This scalability allows you to build rack-mounted systems with the XTR that exactly meet your existing requirements, while allowing for future expansion.

**Multi-Channel Support**
Up to 30 XTRs can be connected easily via an RS-485 bus to provide the ultimate flexibility in remote programming. This eliminates the cost and complexity of requiring GPIB cards in each unit.

Once connected, multiple power supplies can be controlled via a single LAN, USB 2.0, GPIB, RS-232 or RS-485 interface. This provides an efficient option to centrally manage each XTR needed for your applications.

**Straightforward Front Panel Controls**
The XTR is equipped with a unique push-button encoder and function selector dial to provide a simple, uncluttered front panel. Both voltage and current can be set quickly and easily using these two controls. Front panel access can be locked out to ensure secure remote operation. This streamlined front panel layout results in fast, intuitive set-up and operation of the XTR.

**High Reliability**
To guarantee long-term trouble-free performance, the XTR was designed with reliability in mind. Soft-switching technology ensures higher mean time between failure (MTBF) by eliminating high voltage transients found in conventional hard-switching power supplies which can cause premature failure of power components.

Xantrex engineers also rigorously tested the XTR during the design phase using Highly Accelerated Life Testing (HALT). This rigorous test procedure combines powerful thermal and vibration technologies to stress a product beyond its rated specifications. HALT testing allows our engineers to uncover and correct design issues early in the development cycle. This care in design and comprehensive testing ensures the XTR exceeds the reliability and quality standards of both Xantrex and our customers.

**Five-Year Warranty**
The XTR is backed by a comprehensive five-year warranty, the longest in the market. Our superior design and testing techniques result in highly reliable products that will provide you with years of trouble-free performance.
### XTR 850 Electrical Specifications for 6 V to 600 V Models

  - 5 V
  - 5 V
  - 5 V

#### Environmental Specifications (Indoor use)

- **Operating Temperature Range**
  - 32°F to 122°F, 100% load (0°C to 50°C)

- **Storage Temperature Range**
  - -4°F to 158°F (~20°C to 70°C)

- **Operating Humidity Range**
  - 30–90% RH (no condensation)

- **Storage Humidity Range**
  - 10–95% RH (no condensation)

- **Operating Altitude**
  - Up to 6,500 feet (2,000 m)

- **Pollution Degree**
  - II (IEC 1010-1)

- **Efficiency**
  - 75/77%
  - 77/80%
  - 81/84%
  - 82/85%
  - 83/86%
  - 83/87%
  - 83/87%
  - 83/87%
  - 83/87%
  - 83/87%

#### Regulatory Approvals

- **Safety**
  - CSA 22.2 No. 61010-1 and UL61010-1. Marked with c(UL) us, CE EN61010-1

- **EMC**
  - Complies with EN55022, Class B, FCC Part 15B for conducted emissions
  - Complies with EN55022, Class A, FCC Part 15A for radiated emissions

- **Warranty**
  - Five Years

---

1. Maximum output voltage is guaranteed to be 0.1% of the rated voltage at zero output setting, using the front panel or digital remote programming modes.
2. Maximum output current is guaranteed to be 0.2% of the rated current at zero output setting, using the front panel or digital remote programming modes, and when measured with rated load resistance.
3. Total output power is also based on AUX1 Output Voltage (5 V) and AUX1 Output Current (0.5 A) and AUX2 Output Voltage (15 V) and AUX2 Output Current (0.5 A).
4. From 85–132 Vac or 170–265 Vac, constant load.
5. From 85–132 Vac or 170–265 Vac, constant load.
6. From no load to full load, constant input voltage.
7. For load voltage change, equal to the unit voltage rating, constant input voltage.
8. For 6 V models the current ripple is measured at 2–6 V output voltage and full output current. For all other models, the current ripple is measured at 10–100% output voltage and full output current.
9. When using remote sense, the total of the load voltage and the load line drops must not exceed the rated output of the power supply. For example, for an XTR 6-110 in an application with 1 V of load-line loss (5 V/Line), the maximum available load voltage would be 6–1 = 5 V. Note: The unit may operate at higher output voltages than this, but there is no guarantee that the power supply will meet performance specifications. Ultimately, the upper limit of the output voltage will be determined by internal circuitry of the power supply (non-adjustable.)
10. With resistive load.
11. At 100/200 Vac input voltage and maximum output power.

Specifications are guaranteed from 1% to 100% of the rated output voltage, current, and power.

<sup>1</sup> Typical APG or isolated APG accuracy can be improved to max accuracy by user calibration at the specific range selected

### Parallel Operation

Up to 4 units in master slave mode

### Series Operation

Up to 2 units (with external diodes)

### Constant Voltage (CV) Constant Current (CC) Indicator

CV: TTL High (4-5 V)
CC: TTL Low (0-0.6 V)

### Shutdown Control<sup>2</sup>

Logic low 0.0 - 1.4 V
Logic high 2.0 - 15 V
Dry contact compatible

### AUX On/Off Control

TTL level or dry contact compatible

### Power Supply Status Signal

TTL high: OK (4-5 V)
TTL low: fail (0-0.6 V)

### Interlock Enable/Disable

Dry contact. Open/Short: On or Off programmable

1. Typical APG or isolated APG accuracy can be improved to max accuracy by user calibration at the specific range selected
2. The shutdown input has user selectable negative logic operation via front panel or remote digital input/output

1. Current 0.5 X minimum guaranteed at 0.75 A typically available. Overcurrent protection (both output) is automatic, over-boosting when OCP is triggered the aux voltage folds back and will recover to normal condition when the over current condition is removed (eg. <0.24). To protect external circuits attached to the aux outputs it is recommended that customers use an appropriately rated fuse to relieve with the aux outputs set point 10-100%.
2. Time for the output voltage to recover within 0.5% of its rated output for a load change 10-80% of rated current. Output set points 10-100%.
3. For floating chassis ground applications, please contact application engineering for system design assistance.

7. Control connector
8. Auxiliary output and isolated control connector
9. USB connector
10. RS-485 connector out port
11. Fan exhaust vents
12. DC output bus bar positive (6-40 V)
13. DC output bus bar negative (6-40 V)
About Xantrex

Xantrex Technology Inc. (www.xantrex.com) is a world leader in the development, manufacturing and marketing of advanced power electronic products and systems for the renewable, portable, mobile, and pro-grammable power markets. The company’s products convert raw electrical power from any central, distributed, or backup power source into high-quality power required by electronic and electrical equipment. Head-quartered in Vancouver, British Columbia, the company has facilities in Arlington, Washington; Livermore, California; San Diego, California; Elkhart, Indiana; Barcelona, Spain; and Reading, England. Xantrex is publicly listed on the Toronto Stock Exchange under the ticker symbol “XTX”.
